# 数控刀具综合样本

NUMERICAL CONTROL TOOL SYNTHETIC SAMPLE

## 公司简介

COMPANY PROFILE >>>

株洲山特科技有限公司位于株洲国家高新技术开发区，公司是一家集硬质合金产品的研发、生产、销售为一体的企业。主要产品有硬质合金切削刀片、锯片、矿山工具、模具材料、PCD/CVD/PCBN氮化硼超硬刀具、硬质合金棒及非标硬质合金制品。广泛应用于模具工业、汽车工业、轨道交通、工程机械、3C工业、航空航天、能源设备、通用机械、石油化工等行业。高精度车削、铣削、镗销、钻削、切断切槽和螺纹绞削加工的数控刀片及配套刀具、硬质合金整体刀具及工具系统，并能根据客户的不同需求生产各类切削工具，为机械加工制造提供整体配套解决方案。

公司在硬质合金行业中享有较高的声誉。各种产品可以满足客户的不同需求。公司拥有一批经验丰富的技术人员，先进的硬质合金生产设备，一流的检测中心配套精密模具生产线和深加工生产线。

Zhuzhou Shante Technology Co., Ltd. is located in Zhuzhou National High tech Development Zone. The company is an enterprise that integrates the research and development, production, and sales of hard alloy products. The main products include hard alloy cutting blades, saw blades, mining tools, mold materials, PCD/CVD/PCBN boron nitride superhard cutting tools, hard alloy rods, and non-standard hard alloy products. Widely used in the mold industry, automotive industry, rail transit, engineering machinery, 3C industry, aerospace, energy equipment, general machinery, petrochemical industry and other industries. CNC inserts and matching tools for high-precision turning, milling, boring, drilling, cutting grooves, and thread twisting, as well as solid carbide cutting tools and tool systems, can produce various cutting tools according to customers' different needs, providing overall supporting solutions for mechanical processing and manufacturing.

The company enjoys a high reputation in the hard alloy industry. Various products can meet the different needs of customers. The company has a group of experienced technical personnel, advanced hard alloy production equipment, first-class testing centers, precision mold production lines, and deep processing production lines.

## 装备水平

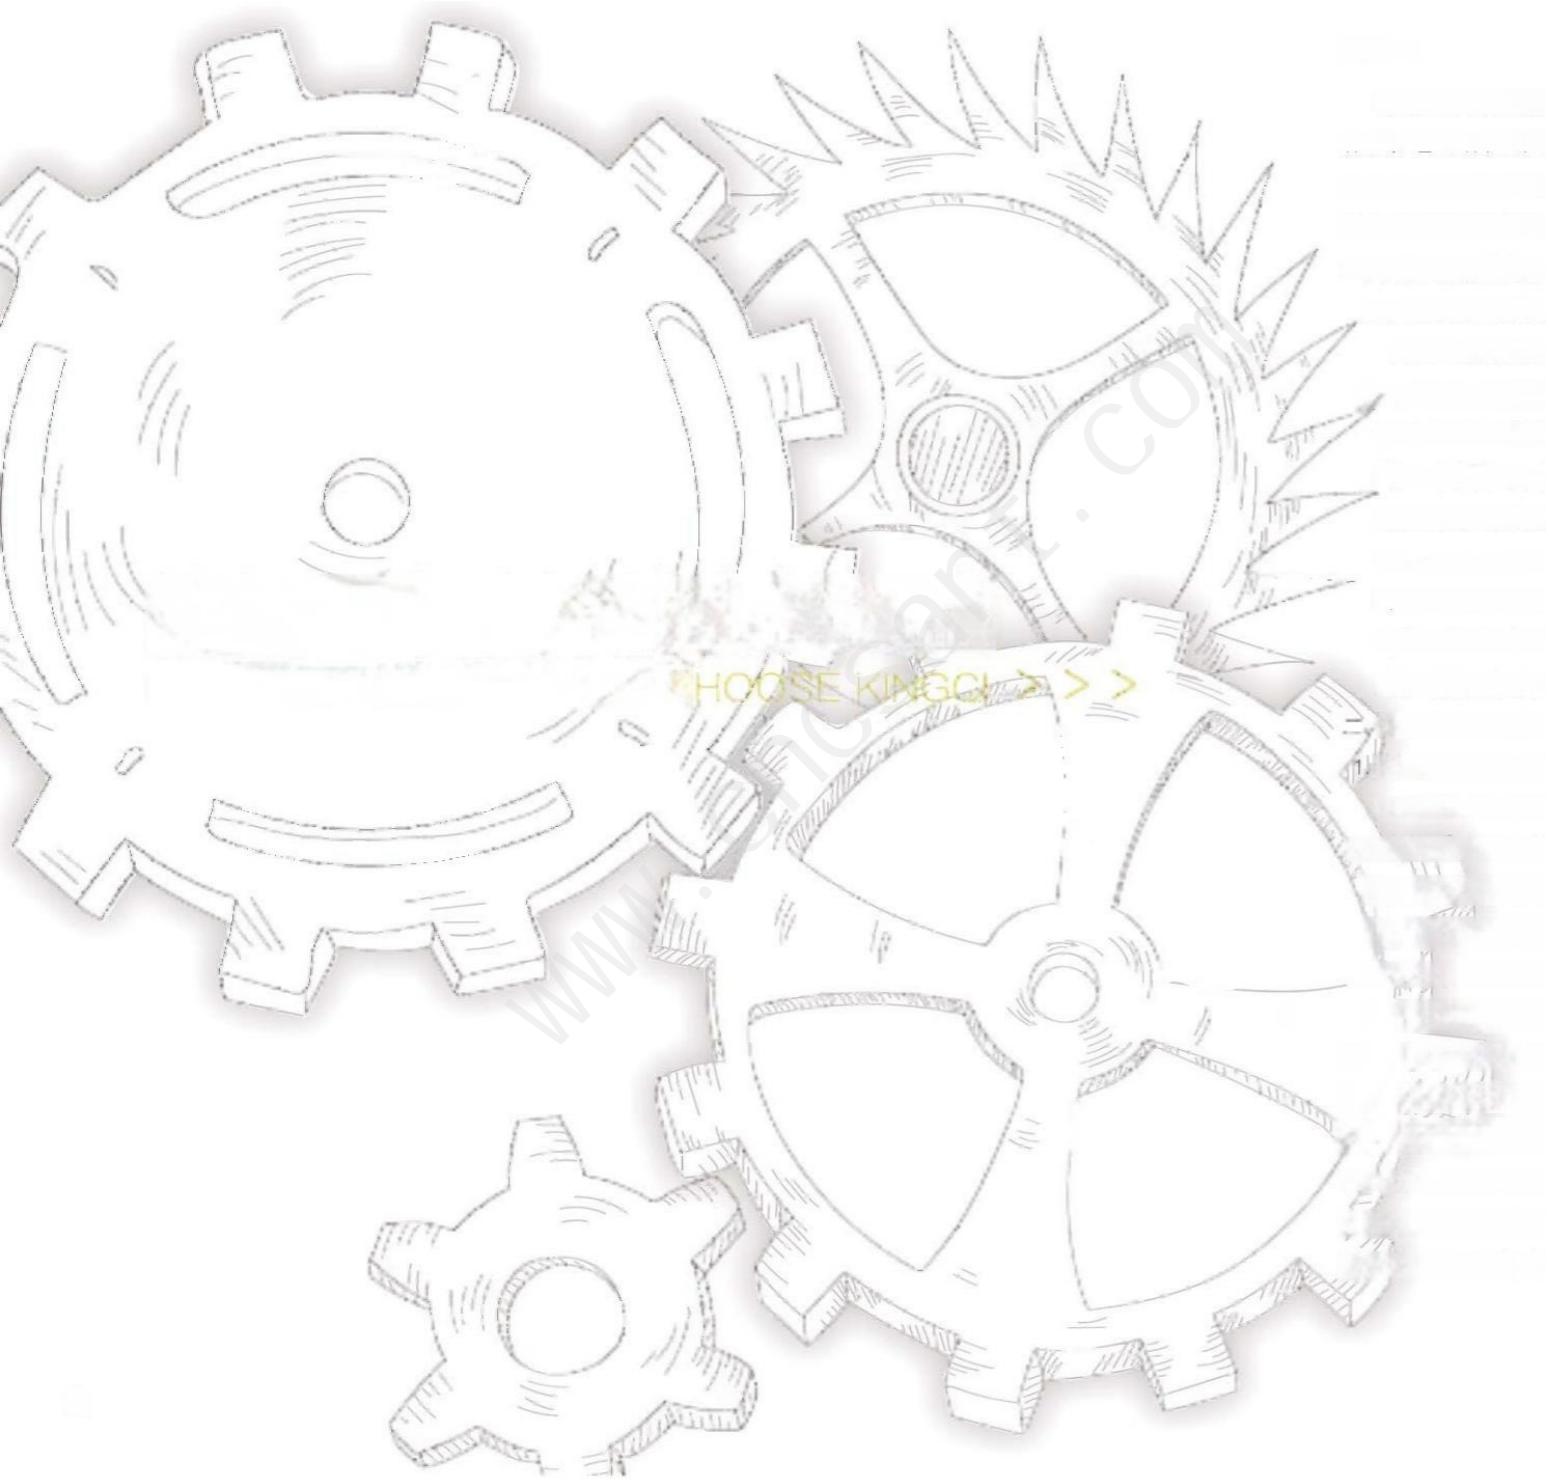

EQUIPMENT >>>

公司拥有从粉料、成型、烧结、研磨的完整刀片制造工艺装备生产线。压制成型采用国际上最先进的电动直驱自动压力机，其高精度满足了产品的高稳定性高精度连续生产的要求。烧结方面，应用最能满足刀片质溢和外观质量要求的先进压力建设设备。先进的研磨加工设备保证产品高精度的外观尺寸。涂层与巴尔查斯合作采用世界上最先进的物理涂层技术，保证产品性能进一步提高。全套世界一流生产设备保证每一片刀片在使用过程中达到始终如一。

The company has a complete blade manufacturing process equipment, including powder, molding, sintering, and grinding, on the Shengbang production line. The compression molding adopts the most advanced electric direct drive automatic press in the world, which meets the requirements of high stability, high precision and continuous production of products with high precision. In terms of sintering, advanced pressure sintering equipment that can best meet the requirements of blade quality overflow and appearance quality should be applied. Advanced grinding and processing equipment ensures high-precision appearance dimensions of products. The coating collaborates with Balzers to adopt the world's most advanced physical coating technology, ensuring further improvement in product performance. A complete set of world-class production equipment ensures that each blade remains consistent during use.

## 聚晶金刚石材料——PCD

POLYCRYSTALLINE DIAMOND MATERIALS > > >

金刚石作为一种超硬刀具材料应用于切削加工已有数百年历史。在刀具发展历程中，从十九世纪末到二十世纪中期。刀具材料以高速钢为代表；1927年德国首先研制出硬质合金刀具材料并获得广泛应用；二十世纪五十年代，瑞典和美国分别合成出人造金刚石，切削刀具从此步入以超硬合金刀具材料为代表的时期。二十世纪七十年代，人们利用高压合成技术合成了聚晶金刚石(PCD)，解决了天然金刚石数量稀少、价格昂贵的问题，使金刚石刀具的应用范围扩展到航空、航天、汽车、电子、石材等多个领域。

与大单晶金刚石以及常规CVD金刚石材料相比，作为刀具材料的聚晶金刚石有以下优点：

1)晶粒呈无序排列，各向同性，无解释面，因此它不像大单晶金刚石那样在不同晶面的强度、硬度以及耐磨性有较大区别，以及因解释面的存在而呈现脆性。

2)具有较高的强度，特别是PCD复合片，由于有硬质合金基体的支撑而又较高的抗冲击强度，在冲击较大时只会产生小晶粒破碎，而不会像单晶金刚石那样大块崩缺，因而PCD刀具不仅可以用来进行精切削加工和普通半精密加工，还可用作较大切削量的粗加工和断续加工(如铣削等)，这大大扩充了金刚石刀具材料的使用范围。

3)可以制备大块刀具坯料，满足大型加工刀具如铣刀的需要。

4)可以制成特定形状以适合于不同加工需要。由于PCD刀具大型化和加工技术如电火花和激光切割技术的提高，三角形、人字形以及其他异形刀坯均可加工成形。为适应特殊切削刀具的需要还可以设计成包裹式、夹心式与花卷式刀具坯料。

5)可以设计或预测产品的性能，赋予产品必要的特点以适应它的特定用途。比如选择细粒度的PCD刀具材料可使刀具的耐用度等等。

Diamond, as a superhard tool material, has been used in cutting for hundreds of years. In the development of cutting tools, from the late 19th century to the mid-20th century. Cutting tool materials are represented by high-speed steel; In 1927, Germany first developed hard alloy cutting tool materials and gained widespread application; In the 1950s, Sweden and the United States respectively synthesized synthetic diamond, and cutting tools entered a period represented by superhard alloy tool materials. In the 1970s, people used high-pressure synthesis technology to synthesize polycrystalline diamond (PCD), solving the problem of scarce and expensive natural diamonds, and expanding the application range of diamond cutting tools to multiple fields such as aviation, aerospace, automotive, electronics, and stone. Compared with large single crystal diamond and conventional CVD diamond materials, polycrystalline diamond as a tool material has the following advantages:

1) The grains are arranged in disorder, isotropic, and have no explanatory planes, so it does not have significant differences in strength, hardness, and wear resistance on different crystal planes like large single crystal diamonds, and exhibits brittleness due to the presence of explanatory planes.

2) PCD composite chips have high strength, especially due to the support of a hard alloy matrix and high impact resistance. When subjected to large impacts, only small grains will break, rather than large chunks like single crystal diamond. Therefore, PCD tools can not only be used for precision cutting and ordinary semi precision machining, but also for rough machining and intermittent machining with large cutting amounts (such as milling, etc.), greatly expanding the range of use of diamond tool materials.

3) It can prepare large tool blanks to meet the needs of large machining tools such as milling cutters.

4) It can be made into specific shapes to meet different processing needs. Due to the miniaturization of PCD cutting tools and the improvement of processing technologies such as electrical discharge and laser cutting, triangular, herringbone, and other shaped blanks can be machined into shapes. In order to meet the needs of special cutting tools, it can also be designed into wrapped, sandwich and Steamed rolls tool blanks.

5) It is possible to design or predict the performance of a product, endowing it with necessary features to adapt to its specific use. For example, choosing fine-grained PCD tool materials can improve the durability of the tool, and so on.

## PCD 刀具材料型号及特性

PCD tool material model and characteristics

材质 material quality	粒度 granularity	耐磨性 wear resistance	韧性 toughness	特点及应用 Characteristics and Application	
PKD002	2	低 low	较高 higher	刃口锋利、光洁度高、抗冲击韧性好，适用于较软的铝件、铜件、木材加工等 Sharp cutting edge, high smoothness, strong impact toughness, Suitable for softer aluminum, copper, wood processing, etc	
PKD010	10	中 in	中 in	光洁度、抗冲击韧性及耐磨性中，通用性材料应用范围较广，铜、铝、塑料、橡胶等 In terms of smoothness, impact resistance, toughness, and wear resistance, universal materials have a wide range of applications, such as copper, aluminum, plastic, rubber, etc	
PKD025	25	高 high	低 low	耐磨性好、硬度高，抗冲击性及光洁度差，适用于高硬度材料及有机材料加工，如陶瓷、高硅铝、硬质合金等 Good wear resistance, high hardness, poor impact resistance and smoothness, suitable for processing high hardness materials and organic materials such as ceramics, high silicon aluminum, hard alloys, etc	
PKD030+	30+2	较高 higher	中 in	耐磨性好、硬度高，抗冲击性及光洁度略差，适用于中硬到极硬材料加工及断续加工 Good wear resistance, high hardness, slightly poor impact resistance and smoothness, suitable for processing materials with medium to extremely high hardness and intermittent processing	

## 聚晶立方氧化硼材料——PCBN

POLYCRYSTALLINE CUBIC BORON OXIDE MATERIALS > > >

聚晶立方氧化硼(PCBN)是将立方氧化硼(CBN)微粉与结合剂在高温高压下烧结而成的聚晶体，结合剂主要有金属型(如Co、Ni)和陶瓷型(如TiC、TiN、Al2O3)两大类，立方氧化硼(CBN)的结构与金刚石相似，化学键类型相同，晶格常数相近，因此具有与金刚石相近的硬度和强度。

立方氧化硼的硬度仅次于金刚石，其显微硬度为8000~9000HV，聚晶立方氧化硼PCBN的硬度一般为3000~4700HV。在切削耐磨损材料时其耐磨损度是硬质合金刀具的50倍、涂层硬质合金刀具的30倍、陶瓷刀具的25倍。

由于PCBN刀具比陶瓷刀具有较高的冲击强度和抗破损性能，通常用来加工铸铁、淬火钢等各种黑色金属材料。此外，一些特制的PCBN刀具能抵御高功率加工的切削复合、减少切削的冲击以及精加工时的磨损和切削热。

近年来，随着CNC(计算机数控)加工技术的迅猛发展以及数控机床的普遍使用，可实现高效率、高稳定性、长寿命加工的PCBN刀具的应用也日益普及，同时也引入了许多先进的切削加工概念，如高速切削、硬态加工、以车代磨、干式切削等。PCBN刀具已成为现代切削加工中不可缺少的刀具材料。

Polycrystalline cubic boron oxide (PCBN) is a polycrystalline material formed by sintering cubic boron oxide (CBN) micro powder and binder under high temperature and high pressure. The binder mainly includes two types: metal type (such as Co, Ni) and ceramic type (such as TiC, TiN, Al2O3). The structure of cubic boron oxide (CBN) is similar to diamond, with the same chemical bond type and lattice constant, thus having similar hardness and strength to diamond. The hardness of cubic boron oxide is second only to diamond, with a microhardness of 8000~9000HV. The hardness of polycrystalline cubic boron oxide PCBN is generally 3000~4700HV. When cutting wear-resistant materials, its wear resistance is 50 times that of hard alloy cutting tools, 30 times that of coated hard alloy cutting tools, and 25 times that of ceramic cutting tools. Due to its higher impact strength and damage resistance compared to ceramic knives, PCBN cutting tools are commonly used for processing various black metal materials such as cast iron and quenched steel. In addition, some specially designed PCBN tools can resist cutting composites from high-power machining, reduce cutting impacts, and minimize wear and cutting heat during precision machining. In recent years, with the rapid development of CNC (Computer Numerical Control) machining technology and the widespread use of CNC machine tools, the application of PCBN cutting tools that can achieve high efficiency, high stability, and long life machining has become increasingly popular. At the same time, many advanced cutting concepts have also been introduced, such as high-speed cutting, hard machining, replacing grinding with turning, dry cutting, etc. PCBN cutting tools have become an indispensable tool material in modern cutting processes.

## PCBN 刀具材料型号及特性

PCBN tool material model and characteristics

材质 material quality	粒度 granularity	浓度 concentration	结合剂 BOND	特点及应用 Characteristics and Application
PKN9000	2	90%	氮化钛 Titanium nitride	球铁、灰铁、淬火钢断续加工 Intermittent processing of ductile iron, gray iron, and quenched steel
PKN980X	4	90%	金属 Metal	主要加工灰口铸铁性能最佳(HT200\HT250\HT300) Mainly processing gray cast iron with the best performance (HT200\HT250\HT300)
PKN960	2	90%	金属 Metal	主要加工粉末冶金、不锈钢 Mainly processing powder metallurgy and stainless steel
PKN900N	10	95%	金属 Metal	球铁、灰铁、淬火钢断续加工、高速钢 Mainly processing powder metallurgy and stainless steel

## 聚晶立方氮化硼刀具使用注意事项 >>>

1.应用具有足够功率和刚性的机床系统;  
1.Application has enough power and the rigidity of machine tool system

2.尽量使用较大的刀尖圆弧半径, 以保证刀具的最大强度;  
2.Processing with Maximum Cutting Edge Radius,to ensure Cutting Tools lifespan

3.对刀刃进行负倒棱处理, 避免在断续切削时产生崩刃现象;  
3.Machining Cutting Edges Chamfer,to avoid Cutting Tools Collapse during intermittent cutting process

4.刀刃使用时间过长或者切割过程中停机均有可能造成刀刃破损、崩裂;  
4.Processing too long or downtime in cutting process will cause damage or collapse

5.在断续切削时不要使用冷却液。  
5.Donot use coolant during Intermittent Cutting

## 切槽、切断用刀 >>>

Cutting groove and cutting knife >>>

最新推出机卡式PCD 切槽刀切断刀，可实现各种铝件、铜件和其他有色金属外圆槽、端面槽、内孔槽的刀削；PCBN 切槽刀、切断刀，可实现各种铸铁、淬火钢、粉末冶金和其它黑色金属的外圆槽、端面槽、内孔槽的车削。装卡方便、经济实惠，可实现部分材质的快进给切削。

The latest introduction of a machine card PCD slotting knife can achieve cutting of various aluminum, copper, and other non-ferrous metal outer circular grooves, end face grooves, and inner hole grooves; PCBN The slotting knife and cutting knife can achieve the turning of various cast iron, quenched steel, powder metallurgy, and other black metal outer circular grooves, end face grooves, and inner hole grooves. Easy to install and cost-effective, it can achieve fast cutting of some materials.
